

KROOLO AI - Slack Bot Report

What It Does?

- **AI-powered search and tool assistant for Slack**
- Let's only the **authorized users** to connect, manage, and search Dropbox, Drive, Slack (other workspace), and more—directly in Slack

Ways to Use

- **NLP (Natural Language):**
Mention @KROOLO AI and ask in plain English
("@KROOLO AI find slides from Dropbox", "connect me to Drive", "suggest trending documents")
- **Slash Commands:**
`/connect [tool]` — Connect a tool
`/find <search>` — Search (Dropbox, Drive, Slack)
`/disconnect [tool]` — Remove a tool
`/tool_status [tool]` — Check connections
`/intro` — Bot introduction
`/history` — View your recent searches
`/help` — List all commands
All commands also support workspace context and error messaging if usage is wrong.

Supported Operations for the User

1. Connect/Disconnect

- `/connect drive` or `/connect dropbox`
- `@KROOLO AI connect to slack`
- `/disconnect gmail`

2. Check Connection Status

- `/tool_status` or `/tool_status drive`
- `@KROOLO AI what am I connected to?`

3. Smart Search

- `/find project reports`
- `@KROOLO AI search "meeting notes"`

NOTE: Searches return results ONLY if the tool is first connected in the Enterprise Search platform, and also connected via KROOLO AI in Slack. Otherwise, no results.

4. Trending & Suggested Documents

- @KROOLO AI show trending documents
- @KROOLO AI suggest documents

These return popular or recommended files, if available for connected tools.

Note: Slash commands doesn't work for trending and suggested documents

5. Recent Searches

- /history — Shows your last few search queries.
- @KROOLO AI show my recent searches

6. Help & Onboarding

- /help — Command usage and tips
- /intro — Explains what KROOLO AI does, supported tools

Key Points & Caveats

- **Works seamlessly for Google Drive, Dropbox, and Slack (across workspaces)**
- **Other tools (Gmail, Jira, etc.):** Connection functions are available, but search is enabled only for Dropbox, Drive, and Slack at this stage
- **Trending/suggested search** returns make sense only for these connected tools
- **Bot guides with help and error messages if command or tool is wrong, or if prerequisite tool connection is missing**
- **Best practice:** Connect tools through your Enterprise Search platform FIRST, then link them in Slack via the bot

Example Demo Scenarios

- /connect drive — Starts Drive connection process
- /find marketing plan — Returns Drive/Dropbox/Slack hits if connected
- @KROOLO AI suggest documents — Lists recommendations
- /tool_status — Shows which tools are connected
- /intro — Quickly introduces bot and shows how to get started
- /history — Shows what you searched recently
